

# ENOUGH

EUROPEAN FOOD CHAIN SUPPLY  
TO REDUCE GHG EMISSIONS BY 2050

# Initiatives in low- and middle-income countries to tackle decarbonisation

Armin HAFNER

NTNU

Workshop –  
Decarbonising the food chain,  
challenges and opportunities for the food industry

13.08.2025  
Manchester, UK

# Content

- Introduction
- Why clean cooling is important for the decarbonizing
- Examples from SOPHIA
- Examples from INDEE
- Summary

# Why communication about clean cooling solutions?

- Awareness rising is important (globally)
- End-users (owners of assets) are often not informed and aware of the environmental-, health-, safety- and economic risks related to working fluids
- (Only) informed end-users can make sustainable investment decisions when new equipment is required

# Artificial Refrigerants

## PFAS - TFA

## GWP

R-32 [GWP 675]

R-23 [GWP 18 400]

R-152a [GWP 124]

Not:  
fully fluorinated methyl, except R23 -> has H on it

# Clean cooling working fluids

## Carbon Dioxide / CO<sub>2</sub> / R744

Hot water heat pumps, Mobile AC and HP systems  
Commercial- / low temp. industrial refrigeration  
Heat pump chillers

## Ammonia NH<sub>3</sub> / R717

Industrial refrigeration and heat pumps, chillers,...

## Hydrocarbons (Propane, Butane, etc.) / R290, R600

Residential AC split units, Light commercial refrigeration,  
Transport refrigeration and mobile AC, high temp. HPs  
Home appliances (fridges and freezers)

## Water – H<sub>2</sub>O – R718

Industrial refrigeration and heat pumps  
Data centre cooling

## Air– R729

Low temperature applications (< -50°C), Storage of vaccine, Public transport refrigeration: Airplanes, Trains etc.

# Examples – of initiatives

There are many....

- SOPHIA - Africa
- INDEE - India

# Technologies

## An agile and respectful approach

Using various green technologies, SophiA will develop and manufacture locally innovative, modular, affordable and efficient solar powered systems for providing:

-  **Safe, clean drinking water and deionised water for medical purposes**
-  **Hot water and steam production for thermal requirements of the hospitals**
-  **Cooling of medicines and food at +5°C**
-  **Low temperature storage of blood plasma at -30 °C**
-  **Ultra-low temperature storage of sensitive medication (E.g. some Covid-19 vaccines) at -70°C**
-  **Emergency electricity supply for surgical and intensive care units**

# INDEE Projects

## INDEE (2017 to 2020)

Funded by:  
 Norwegian Embassy  
New Delhi

Coordinated by:  
 **SINTEF**  
Energy

## Future Refrigeration India: INDEE+ (2021 to 2025)

Funded by:  
 Norwegian Embassy  
New Delhi

Coordinated by:  
 **NTNU**  
Norwegian University of  
Science and Technology

## INDEE<sup>3</sup> - Sustainable cooling and heating in India (2025 to 2029)

Funded by:  
 Norwegian Embassy  
New Delhi

Coordinated by:  
 **SINTEF**  
Ocean

INDEE+ partners +

# Approach and aim of INDEE

- Support education institutions, vendors and potential end-users
  - free access workshops and trainings across India
  - exchange of candidates and students during their MSc or PhD
- Local engineering and manufacturing
  - Direct support of vendors during design process
  - Follow up during manufacturing
  - FAT at laboratories
  - Follow up of units at end-users
- Policy support
  - Development of practices for End-of-Life Management of Refrigerants and Other F-gases
  - How to support growth and market introduction of natural working fluids systems

# Initiatives and achievements

INDEE → INDEE+ → INDEE<sup>3</sup>

## Teamwork

# Initiatives and achievements

INDEE → INDEE+ → INDEE<sup>3</sup>

Knowledge sharing and -transfer

# Initiatives and achievements

INDEE → INDEE+ → INDEE<sup>3</sup>

CO<sub>2</sub> heat pump at Hotel in Goa

Local made  
demonstrators

CO<sub>2</sub>-NH<sub>3</sub> cascade refrigeration system at NAS Fisheries Pvt. Ltd

CO<sub>2</sub> heat pump at The Akshaya Patra Foundation

CO<sub>2</sub> heat pump at for Mondelez International

CO<sub>2</sub>-NH<sub>3</sub> cascade refrigeration system at Bellfoods Pvt. Ltd

# Highlights – the Chocolate Factory

## Sricity CO<sub>2</sub> Heat Pump

To Eliminate Localized Steam Consumption in Heating process water from 28 C to 85 C

### Key Highlights

0.15  
MM \$

60 K\$/  
Annual  
Saving

800  
Tons/Annum  
Reduction

1300  
Tons Steam  
per Annum

- First of its kind industrial implementation in tropical climate , as well as Mondelez AMEA. Designed along with Indian institute of Science
- 1<sup>st</sup> POC Generates: 1700 L/hour hot water at 85 deg (4 Ton/day Steam Saving), At the same time 15 m<sup>3</sup>/hr Cold water at 7 Deg.
- Re-Application opportunity- Boiler Feed water, CIP Kitchen Water and Process water heating for Crumb, Bar & Candy lines.

**Mondelez**  
International  
SNACKING MADE RIGHT

# Highlights – the Fish Process Plants [Scope III suppliers to EU]

## Outcomes

- Successfully commissioned 9<sup>th</sup> December 2023

13-Aug-25

R744-R717 freezing unit for marine sector

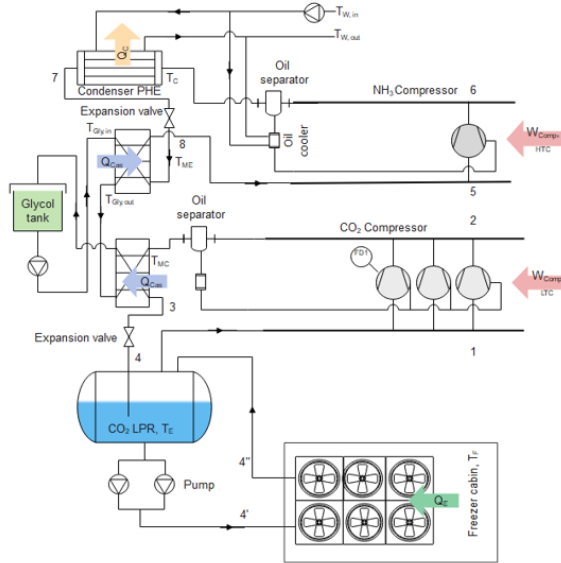

INDEE • NTNU • SINTEF

9

# Highlights – the Fish Process Plants [Scope III suppliers to EU]

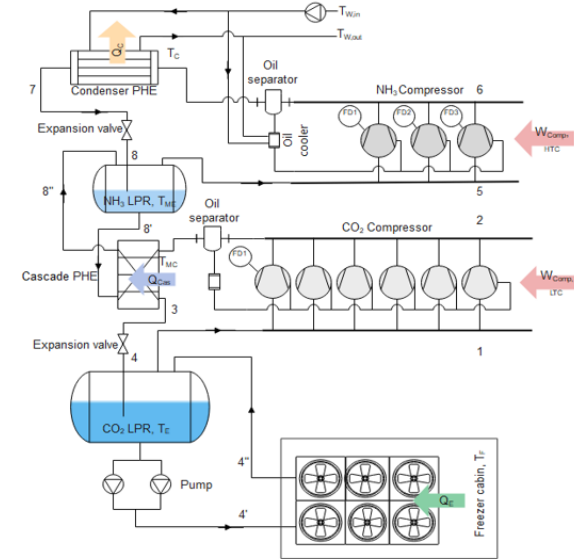

## Demosite-3a, Bellfoods

- Tunnel freezer (IQF) with Cooling capacity **150 kW**
- Three Fluid system, CO<sub>2</sub>-Glycol-NH<sub>3</sub> cascade refrigeration
- Evaporator temperature at **-44 °C**
- Loading capacity 500 kg/h

## Demosite 3b, NAS Fisheries

- Tunnel freezer (IQF) with Cooling capacity **350 kW**
- CO<sub>2</sub>-NH<sub>3</sub> cascade refrigeration system
- Evaporator temperature at **-43 °C**
- Loading capacity 1000 kg/h

13-Aug-25

R744-R717 freezing unit for marine sector

INDEE • NTNU • SINTEF

2

13-Aug-25

R744-R717 freezing unit for marine sector

INDEE • NTNU • SINTEF

- Each demonstration site is operated by the end-user. Local vendor (CF-Tech) will provide the service and maintenance even after INDEE+ is terminated.
- New end-users for CO<sub>2</sub> -NH<sub>3</sub> cascade refrigeration systems:
  - Veronica Marine Exports Pvt Ltd, Kollam, Kerala, 300 kW unit will be commissioned in June 2025.
  - Seafood processing industry in Mumbai (name will be revealed later). 1000 kW unit fabrication work in progress.

# Highlights – The School Kitchen of The Akshaya Patra Foundation

## Approach used to execute the work

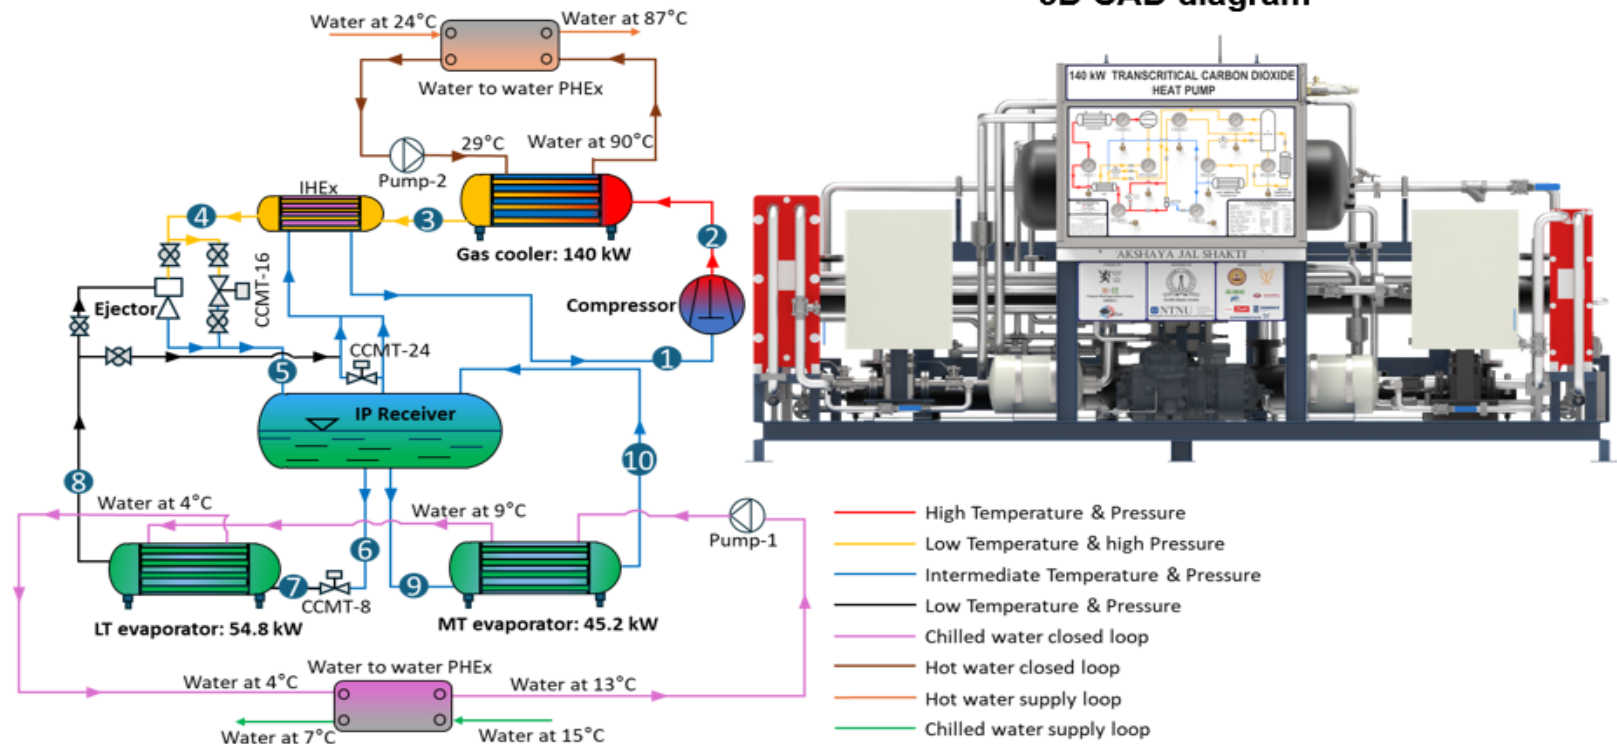

### Demosite-01: Indian school kitchen system (Akshaya Patra Foundation, Bengaluru)

#### Boundary Conditions

- Working fluid :  $\text{CO}_2$
- Heating capacity : 140 kW
- Cooling capacity : 100 kW
- Hot water inlet temp.:  $27^\circ\text{C}$
- Hot water outlet temp.:  $87^\circ\text{C}$
- Chilled water inlet temp.:  $12^\circ\text{C}$
- Chilled water outlet temp.:  $7^\circ\text{C}$
- Max. ambient temp.:  $40^\circ\text{C}$
- COP : 5.6

Demo site-01

Process flow diagram of T- $\text{CO}_2$  heat pump and chiller system

# Highlights – Ice produced on-board small fishing vessels

## Demo-Site Project - On-board Ice Production

Small boats come in many variety!

Mumbai coast: **RSW system**,  
**Demand: Cooling load 3.5 kW**,  
intermittent running, 50% support.

Gujarat coast: **Flake ice system**  
**Demand: 100 kg ice per hour for 10 hr. daily**, 50% support.

Kerala coast: **block ice system** 24 hours of compressor running, 50% support.

# Highlights – Ice produced on-board small fishing vessels

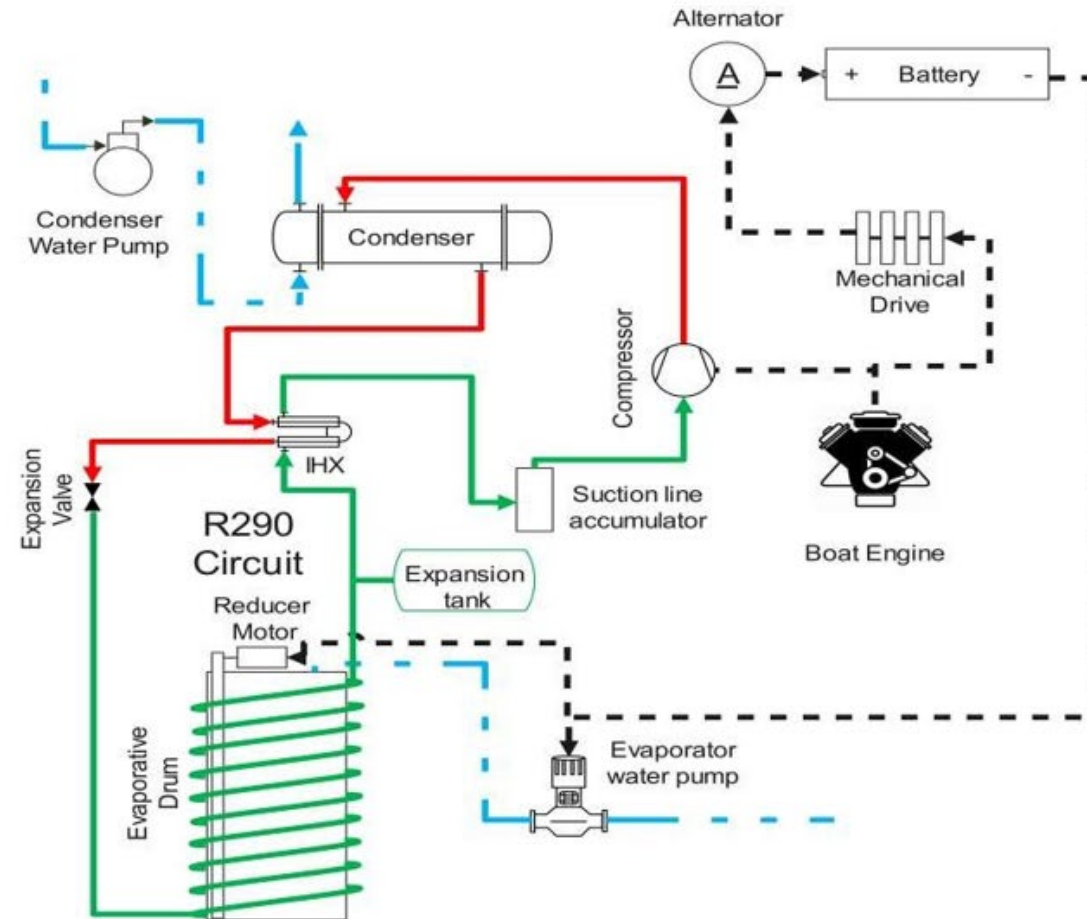

## Schematic

Direct loop  
R290 system  
configuration

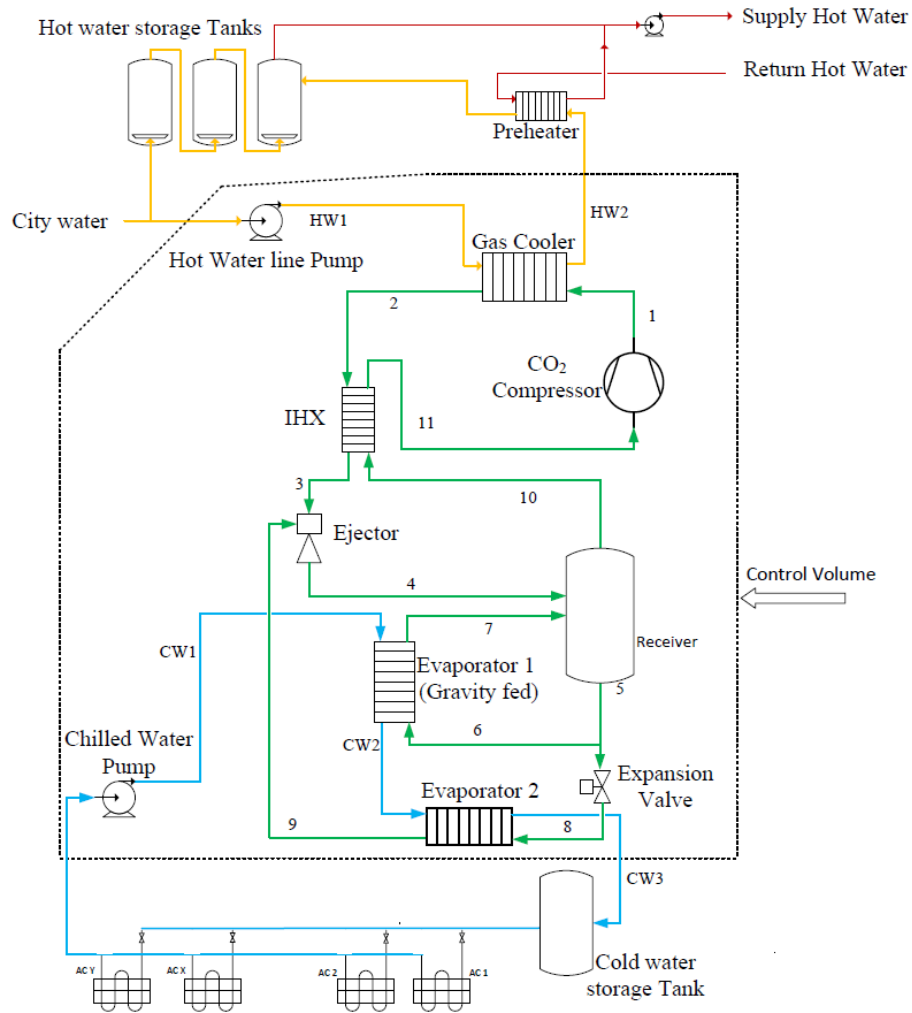

Cooling Load 13 kW

R290 Compressor

# Highlights – Hotel in Goa

Presented during

1st IIR International Conference on  
Refrigeration Adapting to Rising Temperatures  
**Adaptation 2025**  
**MANCHESTER - UK**  
**AUGUST 10-13**

Paper 1168

## R744 Heat Pump Chiller Implemented in a Hotel in India

- The compressor, ejector, and plate heat exchanger were imported
- In-house development of the control system
- Siemens PLC-based control system with a proprietary SCADA platform
  - oil return management
  - ejector control
  - gas cooler and evaporator load balancing
  - water flow regulation and
  - demand-based hotel controls
- Data is logged at three-minute intervals
- Exemplifies make in India

- Manufactured and integrated into the hotel infrastructure by Medors Renewable Energy Pvt. Ltd.

Adaptation 2025 | 1<sup>st</sup> International Conference on Refrigeration Adapting to Rising Temperatures | 10-13 August 2025 | Manchester UK

IIFIIR.ORG

9

- Following the successful operation **Medors Renewable Energy Pvt. Ltd. has received requests to manufacture additional 15 units.**

- Aligns with the primary objective of INDEE+ project which is promoting the adoption of natural refrigerant-based heating and cooling systems in India.

# Topics – INDEE<sup>3</sup>

- Increased awareness and adoption of sustainable HVAC&R solutions.
- Reduced use of harmful synthetic refrigerants and fossil fuel-powered boilers.
  - Low global warming potential
  - No PFAS
- Expand sustainable solutions to food chain, and other sectors
  - Improving cold chain efficiency

# Take home message

From now on:

reminded by the PFAS restriction proposal on its way,

there should be no doubt that **our sector must leave the artificial refrigerant chapter,**

the sooner the better.

Heat pumps are enablers of successful decarbonisation

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 101036588
